Writing for the Adobe Photoshop forum, I felt that the feedback was underwhelming and that the information was available for free from various sources. For my own personal studies, I wanted to compile most of the information into a tutorial that I could share with my other Photoshop users. I hope that the information in this tutorial will help you increase your Photoshop skill and will be able to help fix issues that you may find with your software. I have also made the tutorial available to Adobe as a.pdf file on my web site. Simply visit www.jimmyprojects.com and type in the PDF name and it should automatically download. Please let me know if you have any questions or problems using the tutorial. Also, please provide feedback on the tutorials that you have created. I hope you find the tutorial useful and that it helps you learn more about Photoshop.

Download the Lightroom 5 app from the App Store or Google Play store, or get it in a box from Adobe sites. Start up the application, and you will be directed to the store. From there, you need to initialize and install the app. Before we go into the details of Lightroom 5, let us talk about the differences between the older Lightroom and Lightroom 5. While the old Lightroom was great at adjusting images without retouching the basic features like the Landscape, Portrait, Color effects, Perspective tools, and new Color Balance tools, Lightroom 5 has evolved from a simple application to a more powerful tool for image editing, retaining its basic features while removing some of the old **Color Balance tools** , and adding new features like Filters and Adjustment layers capability. While Lightroom 5 has gained a versatile image editing feature set in addition to the Hit-O-Matic scratch layer, it has not eliminated the 'Power' tool along with its ability to edit color, or the 'Sketch' tool, which adds a randomized, dynamic layer to a layer, without taking up space on the canvas too. Combing all these features will be the task of the learners who are new to Lightroom. While the old Lightroom versions supported the older version of the Adobe Camera Raw software, Lightroom 5 supports the new version of the software, *Camera RAW 8.2*. Such a change may seem, a bit confusing at first, but actually it provides a simple approach to start editing. Moreover, if you have exported your images as sRGB and use DNG files, a conversion to the sRGB format is an automatic process, and hence you can skip the hassle of using the ICC profiles to make color adjustments.

makes sense also to discuss page size. This is how large your pages will be when viewed in a browser depending on the browser you are using and the actual browser settings. For instance, IE 6 and 7 makes web pages 1024x768, IE 8 makes pages much bigger at 2048x1536, and IE 9 makes pages larger at 2560x4320. In the Adobe Suite, you have a selection of sizes, which are more closely matched to the browser's settings. Choose one of these sizes, like 1440x900 at 16:9, and start working on your website design. 933d7f57e6
