characterization of
spherical silica
microbubbles (MS1). The
spherical silica
microbubbles (MS1) were
prepared by
polycondensation of
tetraethyl orthosilicate
(TEOS) and sodium silicate
(Na_2SiO_3) solution in the
presence of ammonia. The
as-prepared MS1 exhibited
a good pore structure,
uniform and monodisperse
distribution, good stability,
and could be used as
adsorbents. When the
silica content was above
15%, the BET surface area

of MS1 was approximately 10 m²/g, and the pore size was approximately 1.5 nm. X-ray diffraction analysis revealed that the as-prepared MS1 mainly consisted of quartz, and a small amount of amorphous silica was formed. The specific surface area and pore volume of MS1 can be adjusted by changing the reaction time and adding different amounts of surfactant (Tween-80). The size of MS1 particles was dependent on the molar ratio of TEOS/SiO₂ and the reaction time. The zeta potential of MS1 was -6.8

mV. The adsorption capacity of MS1 for methyl orange (MO) was higher than for other silica adsorbents. The maximum adsorption capacity of MS1 for MO was 0.821 mg/g

===== How to
Use the BSF File Finder

=====

=====

=====

=====

===== - First,

you must set up a
Workbench Server

Session. Here's an

example: snip:sessions

sessions [-host] [-port] [-

loglevel] [-libdir] [-

noauth] [-nosecure] [-

preferred] [-daemon] snip:
First, let's connect to the Workbench server. This must be done by the account that will run the program. If the Workbench server is run as a user other than the account that will run the program, then the `workbench_server.py` file must be given the RunAs Administrator privileges on the server. This will produce output like this:

WORKBENCH_SERVER:
successfull run To run the Workbench Server you need the following files:
`workbench_server.py`
`workbench_server_ssl.py`

Download the
workbench_server.py file
to your local machine.
Then execute the
workbench_server.py
program. This should start
a GUI Workbench Server.
You need to be connected
to the Workbench Server
from a Windows 7, 8, or 10
machine. The Workbench
Server files are only
supported on Windows 7
and newer. You can start
the Workbench server from
the command line like this:
