Maybe it's the beginning of a color treatment in the sepia tone, a technique that's been around for decades in black and white photography. In Photoshop CC and Photoshop CS6, you have already a sepia tone hue filter option under Filter »Other. In the CSS3 specification, the new Sepia tone shade goes under the rgb and grayscale filters. It actually is also supported in Photoshop Elements 12, but you can't use it as a layer adjustment because the hue filter is not available as a layer tone value. This can also be achieved in Photoshop CC using the Hue/Saturation curves filter. Another Way to insert a sepia tone as a hue filter is to apply a Hue/Sat Adjustment Layer. Not the magic that started in the 1950's, this one is more related to the old days of the past, when the whole grain idea has been forgotten because it is considered to be an old time technology. So, here we go again – filter Mode »Screen. Now, it doesn't get much better than this – the grainy, metallic pattern will make your photos mimic the look of old film.
