"Adobe Photoshop is the world's most widely used graphics and media editing application, and it is a cornerstone of the Creative Cloud. With these new features, we are giving users more ways to work anywhere and everywhere with the power to create stunning imagery, videos and web pages," said Rajesh Jha, senior vice president and general manager, Creative Solutions Group, Adobe. "The addition of these new features expands what's possible with Photoshop and the Creative Cloud, empowering a new class of creative entrepreneurs and professionals to work in exciting new ways." Adobe is also announcing the release of Adobe Creative Cloud Design (CCD), a free app that offers an interactive environment for designers to share links, assets, contextual resources and projects with clients and colleagues. Previously, only photographers could share photo books and other works directly with clients and clients had to buy or log into a subscription to use these tools. With this re-introduction, designers can share links, images and assets that can be viewed on any device, including the iPhone. With the addition of these new features, Photoshop desktop is more than just a graphics editor. With an extensive library of 3D features and tools, users can shape, design and create virtually anything on Photoshop, including 3D images, 3D movable objects, and 3D elements with real-time lighting, reflections, and shadows. With the release of a completely new 3D/VFX engine named Adobe Compressor, edge-driven text and shapes can be easily turned into 3D scenes that can then be viewed from any angle in the 3D workspace of Photoshop.
