PhishGuard For Firefox License Key Full [Mac/Win]

PhishGuard for Firefox Download With Full Crack is an application that provides protection for Firefox. PhishGuard blocks Internet "phishing" or "spoofing" attacks for computers running Microsoft Windows (Windows 98, Windows ME, Windows ME, Windows NT, Windows 2000, Windows XP, Windows 2003). Free versions of PhishGuard work with Firefox or Microsoft Internet Explorer. PhishGuard Pro, our premier product, works with all popular browsers and offers other enhancements, including more frequent scam database updates. Once installed on your computer, PhishGuard unobtrusively monitors sites on the Internet that you visit with your browser. When you attempt to visit a harmful site, a warning window immediately appears giving information on when the site was discovered, and why it is considered harmful. You can still choose to visit that site, but we don't recommend it! The first person to discover a suspected phishing scam can use PhishGuard to report the offending email or URL (website address), literally in seconds. There is no need to divulge any confidential information to the scammers. Within minutes, our monitoring team has verified the scam, and added it to the PhishBase database. Updates to the database are rapidly distributed to every PhishGuard-protected computer, effectively immunizing them against the newly discovered scam. The patent-pending PhishGuard system utilizes the collective observations of Internet users, coupled with an efficient centralized server-based reporting and updating system. This unique architecture dramatically reduces the chance that any phishing scam can "slip through the cracks" and blindsides an unsuspecting Internet user. Supporting PhishGuard in this capacity involves no charge to you; the current cost to support PhishGuard is shared by the authors of the hundreds of websites, message boards, and newsgroups we monitor for signs of infection. For more information on how to report suspicious sites, please visit: [Do I need to tell anyone about my PhishGuard installation?](#) No. The information you send in via PhishGuard is anonymous and confidential, and is used only for the purpose of identifying scammers. There is no requirement that you divulge the information you send to us. Downloading/Updating PhishGuard: An Internet connection is required for downloading and updating PhishGuard. The PhishGuard logo on the website indicates what kind of Internet connection is required. Some PhishGuard updates are critical; in these cases, the

PhishGuard For Firefox Crack Free Download

KeyMacro is an easy to use utility that creates keyboard macros in Windows. KeyMacro is a great tool to create shortcuts from any website address, which can be applied to any text area in an application (WinWord, Web pages, etc.). Just type the website address you want to have a shortcut to in the Address text box, and press the keyboard shortcut. The macro is automatically copied and applied in your browser, where it will appear as a URL in the status bar. You can configure these shortcuts to access the most popular sites and navigate them directly to the page you want to visit. KeyMacro has an optional accelerator, which is a hotkey that will be activated when the browser is focused and a URL is being entered. You can configure the hotkey to apply to any application. We also have a browser plug-in (javas/), which allows for the saving of any website as a bookmark and is customizable for Firefox, IE, and Netscape. KeyMacro is designed to automate the process of visiting a site and copying the URL. In addition, this program can be used to quickly change the address bar in the browser to any address. The address bar must be visible to use the shortcut feature. Benefits: Save time visiting web sites. Save time typing web addresses. Save time from typing the same URL over and over again. Customize the toolbar of your browser, for faster web surfing. Helpful for those with poor vision or bad memory. Use in conjunction with any of the following programs: KeyMacro offers several options and can be installed on any platform: Windows 95, 98, ME, NT, 2000, XP, Vista, Vista Service Pack 1 Mac OS 9, 10, Classic Linux The program supports the following platforms: Windows 98, 2000, ME, Vista, Windows 2000, XP, Windows NT Macintosh Linux (KDE, GNOME, X) OS/2 (Warp, Warp Server) Solaris 8, 9, 10 Alpha, HP-UX, Irix, SCO, SGI Linux 2.4, 2.6, 2.8 Linux 2.2. 2edc1e01e8

PhishGuard For Firefox

PhishGuard is a personal firewall that protects your computer from online scam emails, such as those used to trick you into giving out your credit card number, banking or other personal information. The resulting loss could cost you thousands or even millions of dollars. PhishGuard monitors your Internet activities, either through the Internet browser itself or through another application you use to browse the Internet, and warns you when you visit a potentially harmful site. Some phishing emails are simple attacks; the message is simply a cleverly disguised spam that tries to get you to execute some malicious code or give your personal information. Other phishing attacks are more sophisticated and cleverly disguise themselves as something genuine. For example, you could be tricked into downloading a fake program, that secretly steals your bank account or credit card information from your computer without your permission. Or you could be targeted with a phishing attack that tricks you into giving your passwords, or personal information, to a fraudulent website. To make sure you can always tell the difference between real and fake, PhishGuard displays a warning window when it detects a potentially dangerous site. A single click on the 'Report' button then lets our monitoring team verify the scam and add it to the PhishBase database, so that it can be used by all PhishGuard users. PhishBase is where all of the spam and phishing sites are stored. This is a database of suspected phishing sites and uses software algorithms to analyze the site for malicious activity. Sites added to PhishBase are automatically added to all PhishGuard protected computers and are checked each time you visit a site. The first person to report the site gets added to the PhishBase database as well. PhishBase uses a patented technology to detect suspicious sites that is significantly faster than competing systems. Within minutes, PhishGuard's team has verified and analyzed the site and added it to the database. Our Pro Edition version of PhishGuard offers additional features and can be used with any browser (Firefox, Internet Explorer, Netscape). PhishGuard Pro also allows the user to automatically add a site to the database every time you visit it. PhishGuard Pro comes with a 30-day FREE trial version of PhishGuard, which is available at The FREE version will not store your account credentials for PhishBase or add the URL to the database. What's New in This Release: - New HTML5
